# EASY WAYS TO SAVE WATER AT HOME

## Keep showers short & sweet

Cutting your shower time by just 2 minutes can result in a water saving of up to 30%.

## Water when it matters

Stick to your watering days and only water on those days.

Before 9am is best as it allows the water to soak into the plant's roots and be available throughout the day.

Not all leaks are easy to find and if you don't find and fix them, you could be wasting up to 10,000L per year!

### Fix those Leaks!

## Set the optimal sprinkler run time

Different types of sprinklers have varying water rates, so make sure you check the recommended watering times for your sprinkler type.

## Wash clothes more efficiently

Pile up your dirty clothes until you have a full load. Cutting back on your washing by just one load a week will save up to 120L.

## Turn off the tap while you brush

Every minute you leave the tap running wastes up to 10L of water.

## Protect your garden with mulch

Applying a generous layer between 5-10cm across the surface of the soil can greatly reduce evaporation loss, improve the soil, reduce weed growth and enhance the appearance of your garden

## Rethink your lawn habits

A green lawn is often thought as the centerpiece to a beautiful garden, but water isn't the only thing you need to get that gorgeous green. You can save time caring for your lawn by using wetting agent at least 3 times a year.
